

E8741.01-113-11-R0 ACOUSTICAL PERFORMANCE TEST REPORT ASTM E 90, ASTM E 492, ASTM E 2179

Rendered to

PLITEQ INC.

Series/Model: 305 mm (12") Square Ceramic Tile on Pliteq GenieMatTM RST12 Rubber Underlayment

Specimen Type: Concrete Slab - 203 mm (8")

Overall Size: 3023 mm by 3632 mm (119" by 143")

| STC | 57 |
|-----|----|
| IIC | 55 |
| ΔΠΟ | 22 |

Test Specimen Identification:

Floor Topping: 8 mm (0.31") Daltile Ceramic Tile Floor Underlayment: 12 mm (0.47") Pliteq GenieMatTM RST12 Rubber Underlayment Floor Slab: 203.2 mm (8") Concrete Slab

Reference should be made to Intertek-ATI Report E8741.01-113-11 for complete test specimen description. This page alone is not a complete report.

Acoustical Performance Test Report

PLITEQ INC. 1370 Don Mills Road Unit 300 Toronto, Ontario M3B 3N7 CANADA

| Report | E8741.01-113-11 |
|--------------------|-----------------|
| Test Date | 06/15/15 |
| Report Date | 06/19/15 |

Project Scope

Architectural Testing, Inc., a subsidiary of Intertek (Intertek-ATI), was contracted to conduct airborne sound transmission loss, impact sound transmission, and delta impact sound transmission tests. The complete test data is included as attachments to this report. The client provided the test specimen. The specimen was constructed on the date of testing.

Test Methods

The acoustical tests were conducted in accordance with the following standards. The equipment listed in the attachments meets the requirements of the following standards.

ASTM E 90-09, Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions

ASTM E 413-10, Classification for Rating Sound Insulation

ASTM E 492-09, Standard Test Method for Laboratory Measurement of Impact Sound Transmission Through Floor-Ceiling Assemblies Using the Tapping Machine

ASTM E 2179-03 (2009), Standard Test Method for Laboratory Measurement of the Effectiveness of Floor Coverings in Reducing Impact Sound Transmission Through Concrete ASTM E 989-06 (2012), Classification for Determination of Impact Insulation Class (IIC)

ASTM E 2235-04 (2012) Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods

Test Procedure

All testing was conducted in the VT test chambers at Intertek-ATI located in York, Pennsylvania. The microphones were calibrated before conducting the tests.

The airborne transmission loss test was conducted in accordance with the ASTM E 90 test method using the single direction method. Two background noise sound pressure level and five sound absorption measurements were conducted at each of five microphone positions.

Test Procedure (Continued)

Four sound pressure level measurements were made simultaneously in both rooms, at each of five microphone positions.

The impact sound transmission test was conducted in accordance with the ASTM E 492 test method. Two background noise sound pressure level, two sound pressure level measurements with the tapping machine operating at each position specified by ASTM E 492, and five sound absorption measurements were conducted at each of five microphone positions.

The delta impact insulation test was conducted in accordance with ASTM E 2179 test method. In addition to the impact sound transmission test, two sound pressure level measurements with the tapping machine operating at each position specified by ASTM E 492 with only the concrete slab installed.

The air temperature and relative humidity conditions were monitored and recorded during all measurements.

Test Conditions

| Source Room | | Receive Room | |
|---------------------------|-----------------|---------------------------|-----------------|
| Average Temperature | 21.4°C (70.6°F) | Average Temperature | 20.6°C (69.1°F) |
| Average Relative Humidity | 60% | Average Relative Humidity | 57% |

Test Calculations

The STC (Sound Transmission Class), IIC (Impact Insulation Class), and Δ IIC (Delta Impact Insulation Class) ratings were calculated in accordance with ASTM E 413, ASTM E 989, and ASTM E 2179, respectively.

| Material | Dimensions (mm/inch) | Thickness (mm/inch) | Manufacturer and Series | Quantity | Average Weight |
|---------------|---|------------------------|---|------------------------|--------------------------|

Test Specimen Materials and Installation Details

Comments

The total weight of the floor/ceiling assembly was 5664.4 kg / 12487.9 lbs. Intertek-ATI will store samples of the test specimen for four years. Photographs of the test specimen are included in the attachments. A drawing of the test specimen is included in the attachments.

Intertek-ATI will service this report for the entire test record retention period. Test records, such as detailed drawings, datasheets, representative samples of test specimens, or other pertinent project documentation, will be retained by Intertek-ATI for the entire test record retention period. The test record retention period ends four years after the test date.

This report does not constitute certification of this product nor an opinion or endorsement by this laboratory. It is the exclusive property of the client so named herein and relates only to the specimen tested. This report is intended to help in the client's quality assurance program, but it does not represent a continuous or exhaustive evaluation of the specimen tested or of other products or materials that were not evaluated. The statements and data provided herein do not constitute approval, disapproval, certification, or acceptance of performance or materials.

This report may not be reproduced, except in full, without the written approval of Intertek-ATI.
